

Presentation Design: An Overview

Nicole Downing

PowerPoint

This is the main source of software used.

What was PowerPoint used for?

Excel spreadsheets

Charts and Tables

Adobe illustrations

Client Standard Formatting/Decks

Custom Decks

PPT "Make it Pretty's"

PPT Maps

What skills were taken from working with PPT?

Formatting

Alignment

Spacing

Sizing

Aesthetics

Professionalism

Creativity

Excel

Excel is used for everyday for jobs in presentation designs.

Input / Output

- ❖ Would insert the tables into ppt as PEMs (Picture Enhanced Metafiles)
- ❖ Would create charts in the excel and output them into ppt as embedded charts

Word Processing

- ❖ Inputting of words from a text heavy document into a table in excel

Nicole's Art Made					
Title	Year	Medium	Size	Description	Sold

Hammerhead Shark	2024	Acrylic	4in x 4in	Realisitc painting of the animal	\$
Orange Honey	2024	Oil	8in x 10in	Jar of honey with orange slices	
A Western Dusk	2024	Acrylic	24in x 36 in	A cowboy painting set in Arizona	

Custom Tables

- ❖ Could be made for the client with a reference
- ❖ Could be edited

Charts

Can be made in either PowerPoint or Excel

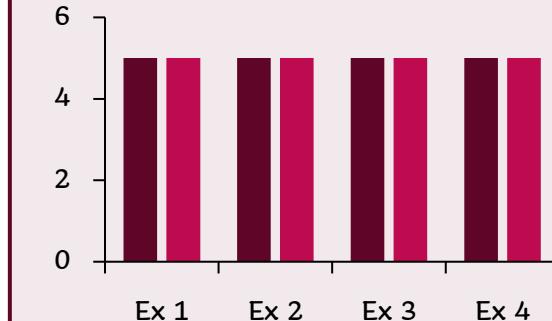

Made to follow either the custom decks formatting or the clients standard

Experience with making any kind of chart the client wanted

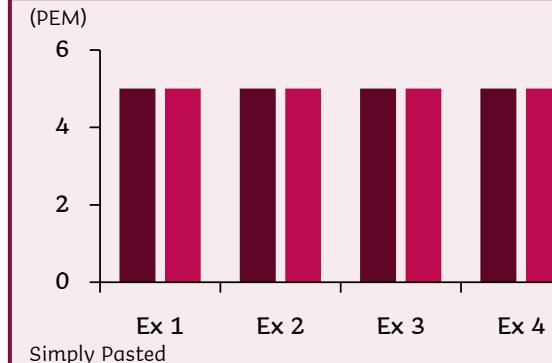

If there was no data for the chart being made, I would bring it into illustrator to trace over it and format the chart in that software.

These can be copied and then pasted into PPT as PEMs, or simply copy pasted. This would make the chart active as if made in PPT

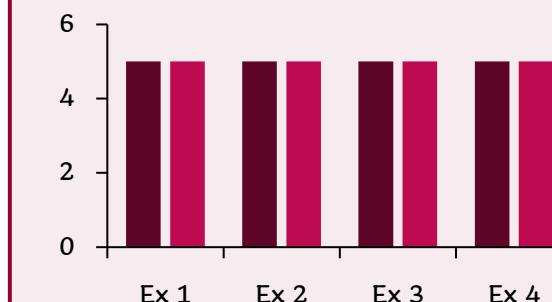

Made in PPT

Made in Excel

Simply Pasted

Customer Service

The main priority of this job is to make sure the client receives what they are asking for, and more.

Staying in constant contact with the client

Used a software that allowed for easy contact with the client and request submission

Would message client directly to let them know their request had been started, message them with any questions and then let them know when finished
